ORION
Hospital IT Management Software Package

ORION

ORION is a complete software solution that controls every part of your Onyx device infrastructure from the server, to the software manager and client devices.This system works the same way as the email servers we use every day to communicate. Each ORION system has a single server that connects to nursing carts (clients) that push their information to the server (similar to sending anemail). The software manager collects information on the server received from the nursing carts to perform further analysis like battery cycle count or capacity attenuation.
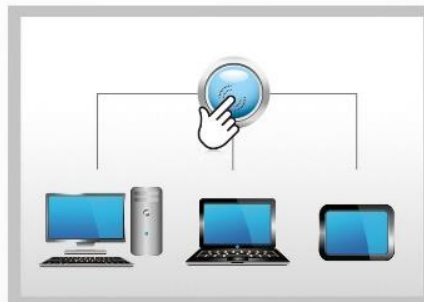

Control all devices from one spot

ORION is a powerful new tool that helps IT managers control every Onyx device connected to your facility's IT infrastructure.Each device can be remotely monitored and controlled, giving IT managers a critical advantage in operational accessibility and efficiency.

Instantly configure all devices with a single click

ORION's true power is its system wide device management capabilities. Devices can be configured individually, in groups, or globally with ORION. In just a fraction of a second, system wide updates can be deployed to all Onyx devices with ORION.

Event Monitor

ORION does more than allow IT managers to connect to and control remote devices. Individual device monitoring gives ORION the ability to provide valuable information to IT managers based on multiple data parameters that help them identify and evaluate potential device failures before they occur.

Contact Information

Onyx Healthcare Inc.

2F.,No.135, Lane 235, Pao Chiao Rd., Xindian Dist., New Taipei City 231, Taiwan (R.O.C.)
